

## COVID-19 Use Case: New Case Management

This use case is designed to help health officials across multiple different agencies report, track, and manage cases of COVID-19 throughout a specified jurisdiction. Using tools from SimplyCast's emergency suite, vital information about possible, presumptive, and positive cases can be collected, displayed, and updated on a near real-time basis as new information is received.

### *How It Works*

Emergency managers can launch a pre-built communication template using SimplyCast's Event application, containing tasks that can be followed for each new possible case of COVID-19 with reporting information being displayed on the common operating picture dashboard.

### *Why use a common operating picture?*

- Central dashboard display
- Reports available at a glance
- Consistency in procedures
- Templated mass notifications
- Multi-level sharing permissions
- Connected to mapping interface
